

Taking complete care of Radisson SAS

The Problem:

As a forward thinking company Hotel chain Radisson SAS takes waste management and recycling very seriously. Their commitment is such that each hotel is targeted to manage their waste output in line with occupancy and to maximise recycling opportunities.

It was generally believed that there were only separate companies available to facilitate Radissons waste management and recycling needs.

The Solution:

ACM's ability to offer an holistic one stop shop solution and reduce Radissons' waste management' costs in the process made great business sense. ACM's vast experience in hotel waste management allowed them to demonstrate the effectiveness of the services available via an efficiency projection model.

The hotel then committed to an ACM Complete Care Programme that involved the installation of a leak-proof waste compactor for general waste and a twin chamber baler for recyclable materials such as paper, card and plastic. Added to this was a programme of collection and recycling for glass and waste cooking oil as well as a full maintenance and management service.

Client Comment:

Ian Weir of Radisson SAS adds:

"The ACM Complete Care Programme effectively provided all of the services we required to meet our targets at a more competitive price than separate contracts could achieve. Their philosophy of holistic waste management and the Radisson SAS Responsible Business policy seemed to be a meeting of minds. We are delighted with the results and to be working with ACM."
