

Bin Crushers

Your Solution(s)

- Utilises minimum floor space
- Cost effective for low volume waste producers
- Quick and easy to use
- Offers waste compaction at a lower entry price

Easy to use

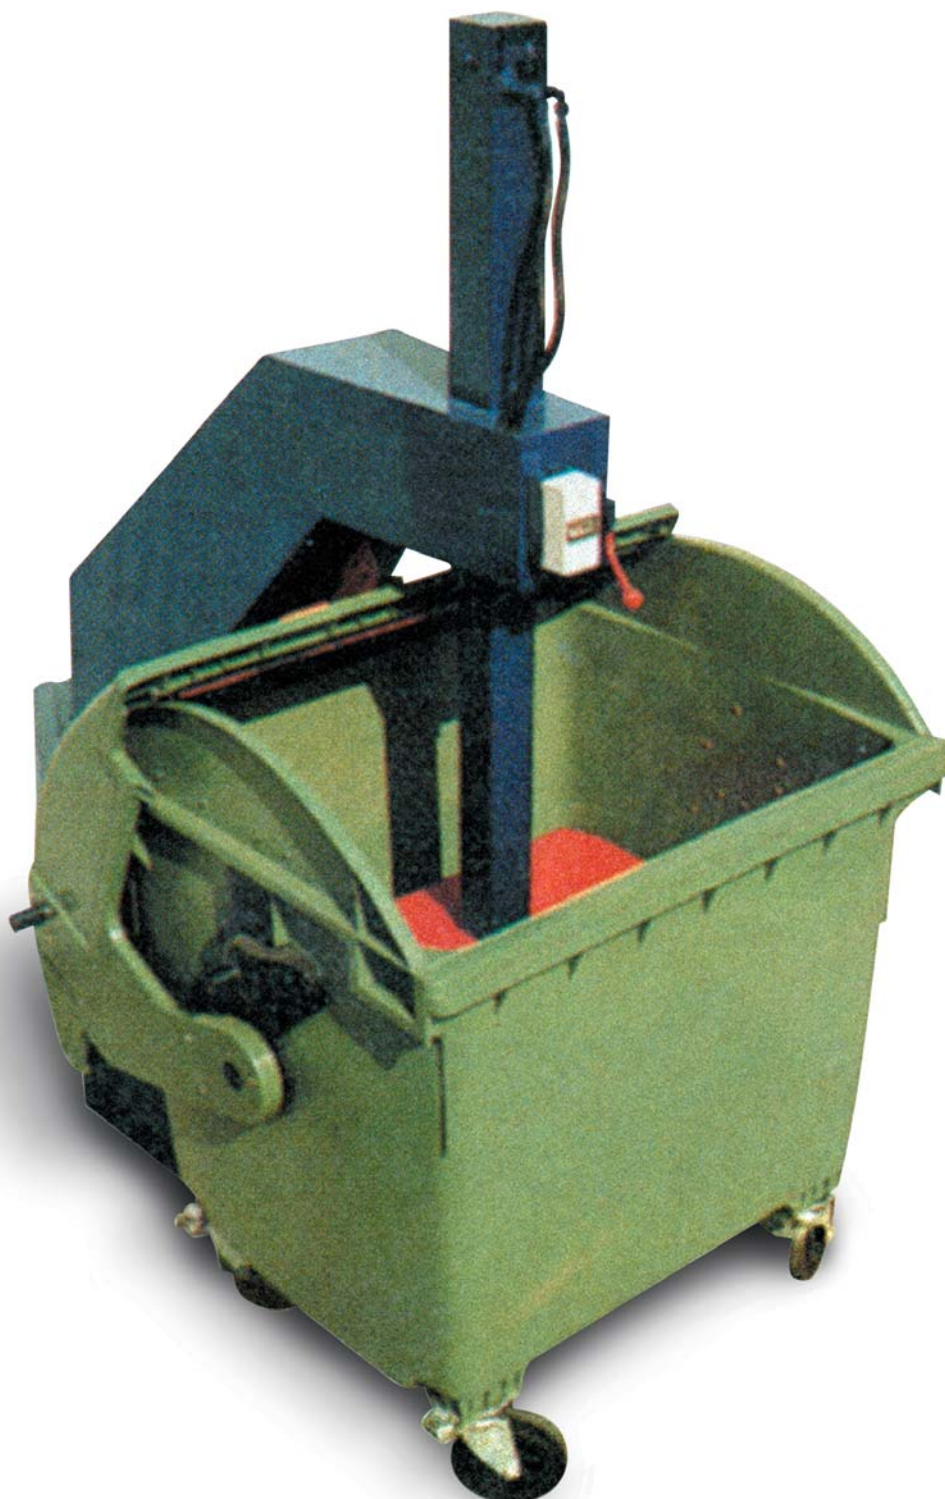

Using the ACM Bin Crusher could not be easier. Simply open the lid of the bin and hook onto the Bin Crusher. Fill the bin with waste and lower the electro-hydraulic crushing plate by means of the hand lever.

Reliable

Heavy duty construction and electro-hydraulic operation ensure a long service life with minimum maintenance.

Practical

A lower purchase price than a dedicated waste press and the ability to use existing bins means that you can see a return on your investment sooner.

An economical solution for low volumes of standard waste

Wherever small amounts of waste have to be disposed of, the use of large compactors is on the whole, not profitable. To do this economically ACM provides the Bin Crusher, especially for sectors where cardboard boxes, wooden crates, cans and tins, etc are collected in 660 or 1100 litre bins.

The sturdy construction and the high compaction are the main features of this crusher which requires only minimum floor space.

Features/Benefits

- Exchangeable supporting plate prevents damage to bin or wheels
- Crushes many types of material with 3 tonne compaction force
- High quality construction for long service life
- Safe operation with bin guard and automatic crusher
