

WasteClear™

Collection • Treatment • Recycling

ACM Environmental's WasteClear™ Programme has 100% diversion from landfill and incineration as its primary goal. It is an integrated solution designed to deliver cost savings, maximise recycling levels and optimise energy efficiency.

The WasteClear™ service is a 3-stage process.

1. SOURCING THE END DESTINATION

We start with the end firmly in mind, which means choosing the optimal destination point for each waste material a client produces. We have an integrated nationwide network of recycling and reprocessing facilities from which to select and our choice will be based on proximity to each client site, environmental outcome and cost.

2. EQUIPPING THE CLIENT'S WASTE DISPOSAL AREA(S)

To deliver waste materials to the chosen facility in their most valuable forms, we specify the most appropriate waste / recycling equipment to be positioned on site. A choice of container types and sizes are available, along with balers and compactors or bespoke solutions wherever necessary.

3. DELIVERING THE LOGISTICS

We select the most suitable haulage services with the foremost vehicle technology to collect the wastes and recyclables from each client's site. In the event of any service shortfalls, a contingency back-up collection service will immediately be deployed.

WasteClear's efficient and environmentally friendly processing methods will maximise the rebate value for your recyclable materials, handling waste at every stage in ways that meet and exceed regulatory compliance standards.

Comprehensive on-site resources

The route to zero waste begins at the waste producer's site and ACM supplies and services a wide range of equipment and offers a variety of consumables.

ACM equipment includes:

- Waste compactors
- Balers (vertical and horizontal)
- Rollpackers
- Glass crushers
- Wheeled bins - 120 - 1100 litres
- FELs/REs (Front/Rear End Loaders) 6-14 cubic metres
- Bins, caddies, silos, tankers and containers (internal and external)
- Bespoke variants of all the above
- Signage to WRAP guidelines
- Baling wire, twine, all types of bags

Rigorous equipment maintenance

ACM offers a range of maintenance, repair and support services tailored to meet individual client requirements and we can ensure that your waste recycling equipment and site operations function to the highest standards of safety and efficiency.

Our experienced field workshop engineers and technicians are resourced with the latest technology and diagnostic tools to confirm that your equipment fully complies with manufacturer recommendations and delivers top performance and reliability.

Recycling, recovery and zero landfill

It is a legal requirement for businesses to handle waste responsibly and comply with current regulations. ACM provides a comprehensive range of commercial waste management services, from commercial waste disposal and recycling collections to supplying waste and recycling equipment for use on site.

Our Customer Services team will arrange collection and transportation of all our clients' recyclable waste to the nearest, most cost-efficient recycling facility where it can be processed for reuse or turned into other valuable resources.

Leading-edge logistics and transport

ACM Environmental uses advanced transport and logistics, cutting costs and reducing environmental impact.

- Electric and hydrogen hybrid vehicles are being increasingly used in our supply chain, delivering fuel savings of up to 33% and supporting the UK's greener transport objective.
- ACM is at the forefront of innovation in logistics and the new vehicle tracking technology currently being rolled out provides accurate information on ETA scheduling. This allows for collections to be timed with precision and for clients to be updated on the status of vehicles whenever required.
- By operating "Approved" bin weighing equipment throughout most of its refuse supply chain, ACM can report accurately on all waste tonnages. As well as offering clients a more precise overview of their waste levels, this provides us with the data to help control waste as part of both WasteTrack™ and WasteSmart™ which are both featured over the following pages of this brochure.

Advanced materials processing

The recycling methods that ACM facilitates are highly successful at extracting waste resources.

Materials that ACM will take for recycling include but are not limited to:

- Dry mixed recycling
- Cardboard
- Paper
- Plastics
- Glass
- Food – ABP (Animal By-Product) and non-ABP
- WEEE
- Effluent/bulk liquids
- Office recycling
- Oils
- Metals
- Confidential shredding (on and off site)
- Green waste
- Textiles
- Animal feeds
- Special & unusual wastes

• If your recyclables aren't listed, we can arrange a site visit to devise an innovative bespoke solution.

• ACM will also provide safe, environmentally sound and legally compliant handling of materials such as hazardous and clinical waste.

WasteClear™ provides ACM clients with high quality, competitive services suited to their geographic locations, the types of waste they produce and their individual business requirements.
